Belzona Inc. Announces New Power Industry Focused Products

Miami, FL – (April 21, 2008) Belzona Inc., a leading provider of coatings and repair composites, announces two new power generation focused products, resulting from ongoing focus in this industry. These novel products, Belzona® 5831 (ST-Barrier) and Belzona® 1831 (Super UW-Metal), were formulated to provide solutions primarily for prolonged prevention against corrosion under insulation.

Both Belzona® 5831 (ST-Barrier) and Belzona® 1831 (Super UW-Metal) are able to displace moisture and hydrocarbons from a substrate thus freeing it for bonding. This allows both products to bond to substrates which cannot be dried or cleaned such as leaking transformer flanges. Chris Lucas, Technical Service Manager for Belzona Inc. states, “Pull-off adhesion testing has revealed that these products are capable of developing over 2,000 psi of adhesion to rough oily substrates. This allows for the permanent repair of equipment which could not otherwise be addressed because it cannot be removed from service.”

About Belzona Inc.

As the manufacturer of industrial protective coatings and repair composites since 1952, Belzona provides a wide variety of solutions to rebuild, repair and maintain machinery, equipment and building structures. Belzona’s local on-site Technical Consultants analyze the situation, recommend the solution, and supervise the application. With their Global Distribution Network covering over 120 countries and 24-hour Technical Support, Belzona is established in the forefront of industry by serving such markets as oil and gas, power, marine, and water/wastewater.
